

Reach

Reach (Registration, Evaluation, Authorisation & restriction of CHemicals) is European legislation (**REGULATION (EC) N° 1907/2006**) that seeks to make available information to improve protection of human health and the environment from the risks of chemicals.

The regulations make provision for the list of chemicals covered to be increased or amended at regular intervals.

Marl International Ltd. is committed to working with our customers and suppliers to be able to offer products that meet their specific needs while complying with current Reach legislation.

We have ongoing contact with our supplier base to ensure non-compliant materials are identified and removed if possible from the components in our products.

Marl constantly strives to improve manufacturing processes and improve levels of environmental awareness. In addition to the work above we are committed to recycling of waste materials, reduction of energy used, and the design of new products to accommodate end of life recycling.

Yours faithfully
Marl International Limited
